

# Reduce your carbon footprint

with GamesForest.Club

# About GamesForest.Club

GamesForest.Club is a non-profit initiative to support the games- and creative industries to benefit from and invest in reforestation and forest conservation.

All of our global nature restoration activities in real life are documented in a digital twin, GamesForest. It playfully visualizes and shares the engagement of each company with its employees, clients, and user communities.

We believe in the power of entertainment and the global community of the games and creative industries to be the pioneers in conquering climate change.

# How we work

## We source our projects according to very high ecological and social standards

The projects we support ensure carbon absorption while also embedding multiple aspects of ecosystem integrity and benefits for the local community.

By reducing carbon footprint with GamesForest.Club, you are also supporting the following Sustainable Development Goals:

We visualize your engagement in the digital GamesForest twin and celebrate your achievements with your community and GamesForest network.

We reduce your administrative costs by building close and trustworthy relationships with the people doing restoration work on the ground.

You get the best carbon credit prices, while we ensure transparent handling of all transactions: from your company's account all the way to the intervention taking place on the land.

We make sure that your money is translated to the maximum climate benefits, advancing your company's effort towards the Sustainable Development Goals.

# Our carbon project in Indonesia

The Gula Gula Food Forest Project is led by an indigenous, matriarchally structured community in West Sumatra.

Degraded land is converted into productive food forests that capture and store carbon.

The local community is trained in assisted natural regeneration techniques and in building regenerative forest enterprise cooperatives.

Community incomes are not only supported through the trading of sustainably sourced food forest products, but also through profit-sharing of carbon credit sales.

## Prices

Reduce 0 - 2,000 tonnes of CO<sub>2</sub>: €23,00/t  
Reduce 2,000 - 5,000 tonnes of CO<sub>2</sub>: €20,70/t  
Reduce > 5,000 tonnes of CO<sub>2</sub>: €18,40/t

## Reduce your carbon footprint with GamesForest.Club

### Easy, environmentally friendly & trustworthy

1. Choose how much carbon you would like to reduce and how many carbon credits you want to purchase. If you don't know your carbon footprint yet, we will help you measure it.
2. We retire the carbon credits on your behalf to minimize administrative costs and provide you with the official certificates.
3. Get your own digital forest page on [www.gamesforest.club](https://www.gamesforest.club) and see your digital forest grow.  
1 digital tree = carbon credits worth 100€
4. Receive a unique GamesForest Restoration Badge.  
If you reduce your entire carbon footprint, you get the badge for compensation.
5. Celebrate your engagement with your employees, clients, and community by getting promoted on social media and in the GamesForest's blog.
